SPECIALIST RANGE

Self-Filling Cover Balls™

A revolutionary new solution to cover large open surface water

Self-Filling Cover Ball™

A revolutionary new solution to cover large open surface water

Euro-Matic have just launched the Worlds first **Self-Filling Cover Ball™** which solves the huge weight issue that its predecessor and other similar products had by being half filled with water. This patented 2-piece assembly has an ingeniously sealed air chamber in one side of the ball whilst the other side is vented to allow water to enter so when put on a pool to sink to half of its diameter.

The perfect solution to cover huge open surfaces, tanks such as:

- Waste water
- Biomass
- Slurry lagoon
- Dangerous materials
- Koi carp and fish pools
- Heated or cooled open surface tanks
- Airports' ponds (camouflage)

Installation is incredibly quick and easy. When settled into the water the additional stability is able to cope with wind speeds in excess of 147km/h (48m/s) preventing balls being blown from the surface.

The naturally close formation of the balls offers a reduction of liquid loss through evaporation by up to 90% yet allows movement of equipment through the liquid

The **Self-Filling Cover Ball™** is very cost effective. With a weight saving of over 80% compared to that of its predecessor the water-filled Bird Ball™, it is much cheaper to transport with over 10 years life expectancy

Advantages

- Surface coverage up to 90%
- Heating costs reduced by up to 75%
- Lowers ice formation by 10°C
- An instant solution—virtually maintenance free
- No running costs and reusable
- No potential water contamination
- Spreads automatically as liquid levels rise and fall
- Quick and simple install

Technical details

Material:

Natural or Black UV stabilised High Density Polyethylene

Ball Diameter:

100mm / 4"

Surface coverage:

Approximately 116 balls per m^2

Weight:

50g
